25X1A

SAC Kabel Correspondence, [REDACTED] 16 pages; Russian and German; [REDACTED]

25X1X

The first report (four pages) consists of (1) a telegram, presumably from SAC Kabel, to a Lebedev, regarding shipment to the Engineering Administration, Ministry of Foreign Trade USSR, of parts and radio tubes for use in satisfying complaints in regard to television sets. This is followed by (2) specifications for the supply of 57 types of spare parts for repairing television sets with the number of units of each type required. This list was sent from the deputy general director of the SAC Kabel to the general director of the Sachsenwerk in Radeberg.

The second report (three pages) consists of remarks on technical specifications for the development of field intensity meters for the 3 to 80 centimeter band. Requirements of the purchaser and the suggestions of the manufacturer are listed.

Third report (six pages) lists 48 electrical instruments, chiefly electrical measuring instruments such as harmonic-analyzers, voltmeters, ammeters, wattmeters, frequency meters, and small electric motors, etc., which are to be shipped to USSR in 1952 by the SAC Kabel Corporation. A supplementary plan for research and development work in 1952 and 1953 on certain types of generators, amplifiers, and meters is appended.

The fourth report (three pages) consists of three SAC Kabel telegrams to Lebedev complaining that shipment of incomplete quantities of radio tubes, lack of technical specifications, and faulty tubes are causing difficulty. These telegrams list specific types and quantities of tubes.

[Large portions of first and second reports are illegible.]
